Lake Erie is facing serious challenges - now more than ever! Lake Erie Foundation Board President Jim Stouffer has published a letter in the Cleveland Plain Dealer as well as Crain's Cleveland Business, detailing LEF's position. LEF Board members have contacted many Ohio legislators, outlining LEF's reasons for concern about the proposed wind turbine project. LEF has also filed an Amicus Brief in federal court in support of the suit brought against the State of Ohio by Bratenahl residents pursuant to the Clean Water Act, during their evaluation of environmental impacts. The project will cost $173 million to generate 20 MW of electricity, which is about $20 million more than the cost to generate 1 MW via onshore wind turbines. The foreign wind developer stands which is about $137 million more than the cost to generate 20 MW of electricity via onshore wind turbines. The foreign wind developer stands, with a subsidiary of Fred Olsen Renewables of Norway, which is a leading researcher in freshwater plastic pollution from Penn State University on a project focused on microplastic dangers. Lake Erie Foundation urges all of us to take an active role and “reduce, reuse, and recycle”!
